Project Scope Definition

The purpose of this website will be to promote the services of Guru Driving School, located in Glenfield, and will provide its potential customers with an easy way to view price options, what each option offers, and book lessons with the instructors they want. Primarily targeting new L-Plate drivers working to get their P-Plates and their parents/guardians, Guru Driving School offers a competitive price, and the website shows this, meaning its users are offered the proper benefits of booking with Guru. The wide budget allows Guru to cater to a large audience of people, regardless of budget. To get only the essentials, Guru will charge a lower price, whereas those who want the full experience will be charged a higher fee. The website will provide users with a functional and informative experience with Guru Driving School.

Criteria	Critical Analysis	How will I evaluate this?	Impact if not achieved
Functional OR Aesthetic Criteria In the rows below, enter functional and aesthetic criteria written in achievable terms, eg " It must ..."	Why is the criteria essential to be achieved?	How will you KNOW you have achieved the criteria?	What would be the impact on your website if you were unsuccessful in achieving this criterion?
Clean and minimalistic layout (Aesthetic)	By keeping only the basic essentials, utilising white space and colour, users will be able to quickly locate what they need.	By getting user feedback via user testing, it can be identified how clean the layout is, and its usability.	Users could waste time and become disinterested in the website, hindering its purpose.
All links, buttons and pictures load and work correctly (Functional)	It keeps the website working as a whole, allowing users to	All links and buttons will be checked and tested.	Users would become frustrated as the website does not function

	navigate the site.		as it is supposed to.
The website must have a working booking system, with different options for different price ranges. (Functional)	This allows for users to know how to book lessons, and the different priced options will cater to most users' budgets.	User testing will be conducted to ensure the system works as intended.	A non-functioning booking system would result in users getting frustrated and ultimately losing interest, leaving the site.
The website must have a contact form and a Google map. (Functional)	Users can easily get in contact to find out more with the product. The map will ensure that users are not confused about the location of the product.	The contact form will be tested using queries. The map will be embedded into the site, and tested to ensure its functionality.	Users would not be able to contact the driving school, which leads to a loss in business.
Pictures and videos are high quality. (Aesthetic)	The visual appeal of the photos and videos will draw customers and promote the service.	A review of the website will be conducted to ensure all the images and videos are loading correctly.	If low quality images and videos are used, users would see the website as unprofessional and not up to standard.

Analysis

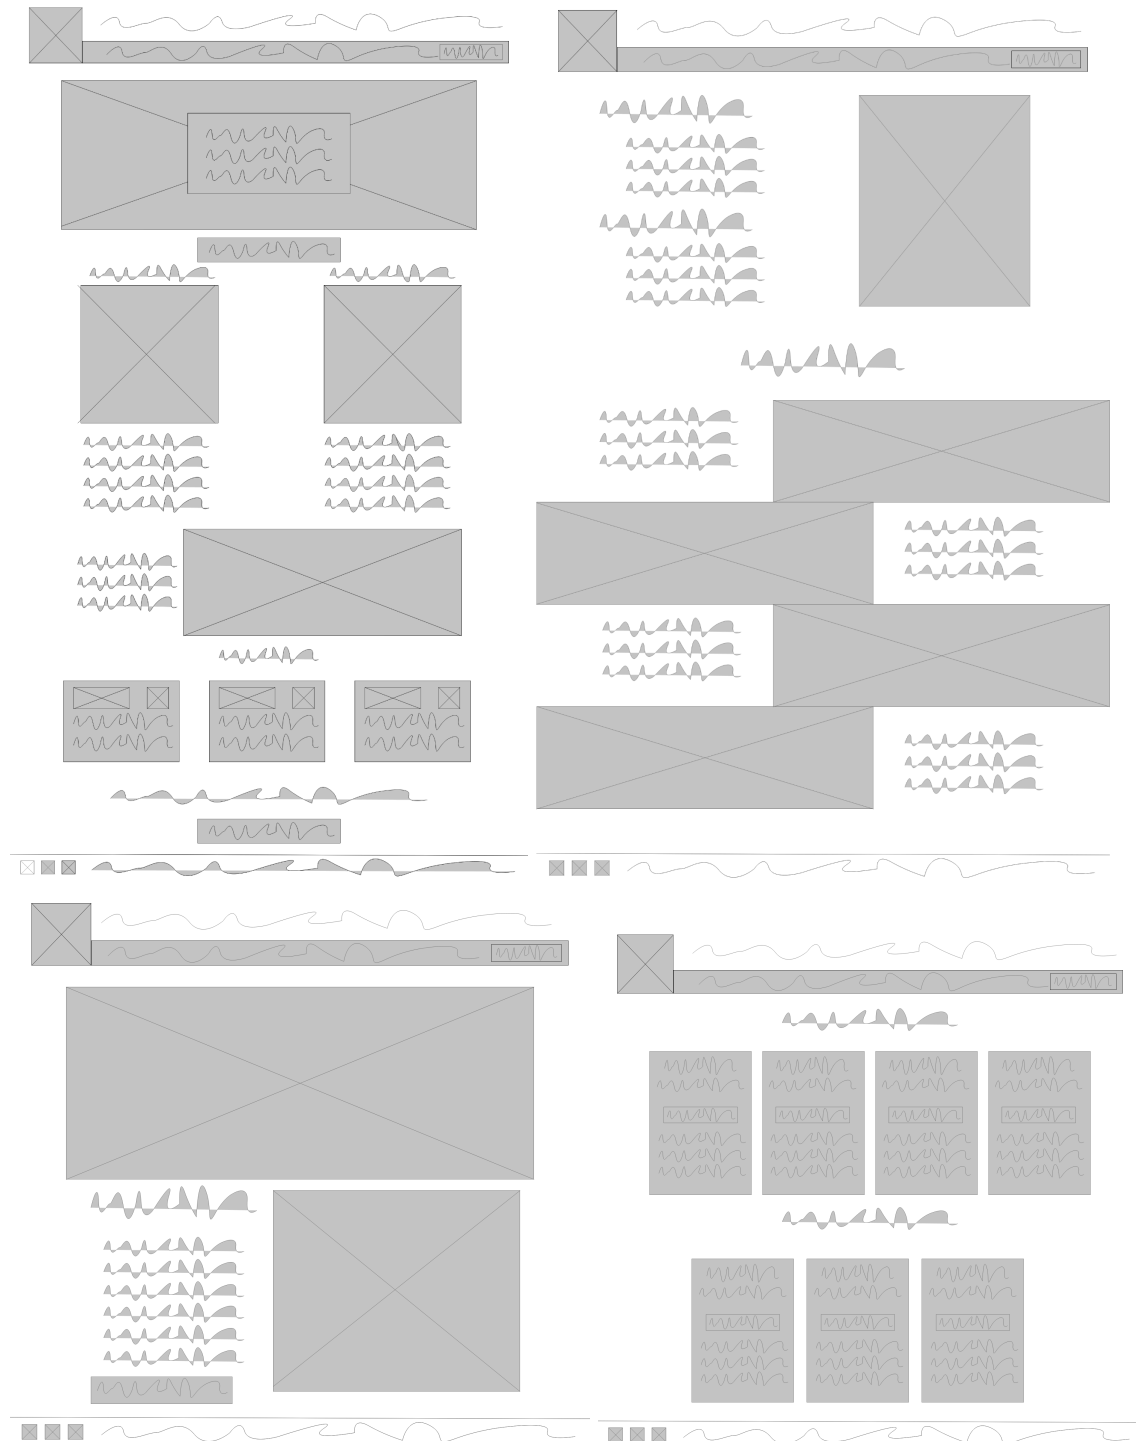

Guru Driving School's website was designed with its customers in mind. Using social and ethical principles, user data is kept safe from prying eyes. Personal details such as names, phone details and emails are stored securely, according to the Privacy Act of 1998. Only data that is required is obtained, with the customer's consent.

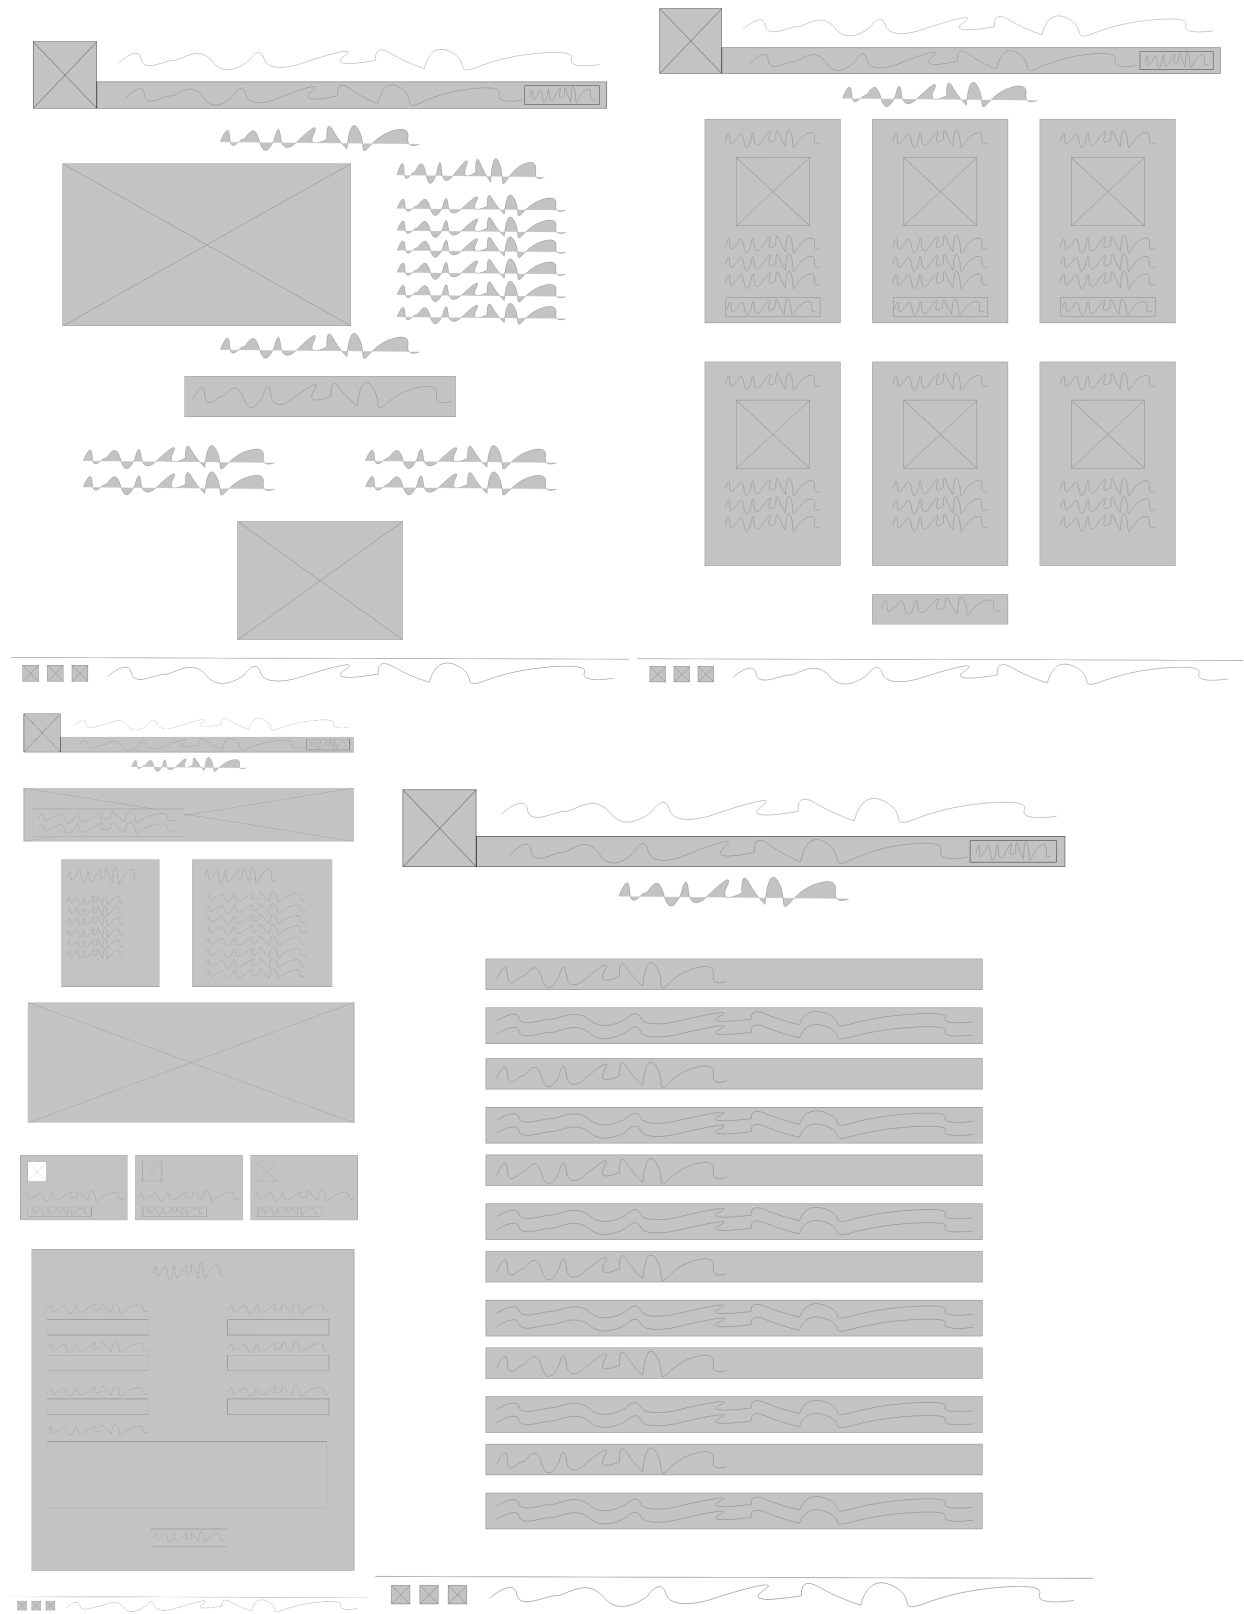

To maintain accessibility and inclusivity of all, there is a clear contrast between text, images and the background. The font is easy to read, with a clean layout. Navigation links are easy to use, just a simple click, and large enough to be easily seen. The layout is easy to use, making it usable for all skill levels of users. The pricing is affordable, undercutting or on par with other competitors. This caters to all different budgets and members of the community.

Ethically, the website ensures that user data is not stolen, as it is stored securely. User data being collected has a clear purpose that is not for marketing purposes, and it will not be given to external parties for other uses. Only those authorised will have access to it, ensuring there is no misuse of data.

In conclusion, the Guru Driving School website promotes and maintains a user friendly environment, protecting its customers from privacy breaches, as well as being open to all members of the community.

Wireframing

Requirements Analysis

Functional Requirements	Non-Functional Requirements
Website must have a homepage	Homepage should be visually appealing, have a logo, hero image, call to action and perform well
A navigation bar must be used	The navigation bar should remain at the top of the page, and include links to other major parts of the website. It should also be consistent throughout all the pages
The contact page must have a functioning inquiry form	It should gather the correct information, and give a confirmation message upon completion
Each page should feature the same footer	The footer should have quick links, copyright information and contact details

The purpose of an interactive system is to allow users to use and engage with digital content. In my website, interactive elements allow the user to browse through the website, and view the company and its product. It also allows them to purchase those products, along with communicating with the company. By using these elements, the user experience can be improved, meaning customers are drawn more to this website over others, increasing demand for the company's product.

Logbook

Date	Objective	Activity Completed	Challenges Encountered	Activities to be completed next
03/03/2025	nil	Task was given out.	nil	Begin research
05/03/2025	Research user needs and requirements for the website	Basic preliminary research was completed	Finding inspiration	Do more research and begin folio
07/03/2025	- Start Folio - Continue Research	Folio cover sheet was completed. Further research was conducted and basic structure has been thought out	Formatting the contents page was quite time consuming	Begin wireframing and do more research.
11/03/2025	- Start and complete sketching of web pages on paper	Began sketching web pages, finished the first two pages	Finding inspiration for the website layout and design	Continue sketching the web pages.
12/03/2025	- Continued sketches	Did 3 pages	Working at a speed that is fast enough	Continue sketching

13/03/2025	- Continued sketches	Did 3 more pages	Time consuming	Finish the final two pages and do project scope definition
14/03/2025	- Complete project scope definition	The project scope definition was completed Analysis was also made	Finding criteria	Begin wireframing
17/03/2025	- Begin wireframing	Started on wireframing using Adobe XD	Using the software initially took some practise	Continue wireframing
19/03/2025	- Continue wireframing	Continued wireframing on Adobe XD	My use of the software was still quite janky.	Continue wireframing
25/03/2025	- Finish wireframing	Gantt chart was completed Wireframe was completed Requirements Analysis was created.	This should have been done earlier.	Begin website construction on adobe XD
27/03/2025	- Begin website construction	Navigation bar was almost finished	Deciding which colour and font to use	Continue working on website prototype
31/03/2025	- Complete Nav bar	Navigation bar was completed and is functioning	Troubleshooting issues took a lot of time	Finish home page
02/04/2025	- Start home page	The home page was started, images and text were inputted into adobe XD	Finding and resizing images was very time consuming, as well as setting up page links	Continue home page
04/04/2025	- Continue	Further	Getting logos	Continue home

	home page	images and text were added	and other images without the background took quite a bit of time	page.
08/04/2025	- Redo navbar	The original navbar was not very appealing to use. Was remade	Implementing the navbar across all the pages took a lot of time, as I had to redo all the individual links	Continue home page
10/04/2025	- Stated redoing the footer	I have realised that my original footer did not meet the marking criteria, redid it to include a quick link.	Copying and pasting the footers over all the pages was time consuming	Continue redesign of footer
03/05/2025	- Continue redesign of footer	The footer was redone in a way so that it fit the marking criteria.	Positioning the new elements in the footer so it looked good	Finish home page and other pages
06/05/2025	- Finish home page and other pages	Home page was completed. Images and text were gathered for the About Us page, Locations Page and Book page.	When creating the links to book lessons on the book page, some were broken, meaning those options cannot be booked. Solved by leaving a note at the bottom of the page telling customers to book in person and creating an	Complete the remaining pages

			error page.	
07/05/2025	- Finish the remaining pages	Resources and instructors pages were finished, filled with text, video and images.	When pasting some images in, they would paste in sideways. The only solution was to rotate the object inside adobe, even though the file was in the correct orientation	Finish the remaining pages
08/05/2025	- Finish the remaining pages - Do testing and evaluating	The remaining pages were completed. It was tested and evaluated. The assignment was uploaded and submitted	The testing and evaluating was meant to be completed earlier, this has been adjusted on the gantt chart.	NIL

Testing and Evaluating

Feature	Criteria	Test Result	Areas of Improvement
Navigation Bar	Consistent across all pages and has links to major parts	All links work correctly and is consistent on every page	Less links could have been used to make it more minimal
Footer	Consistent across all pages, has quick links, copyright information and contact details	All links work and are consistent on every page. It also has all the correct information	The footer could have been a more visually appealing colour
Quality of Images and Videos	All images and videos are of high quality and	All images are quickly loaded. However not all	Use better quality videos and images

	load quickly	videos and images were of high quality	
Error Page	Presents an error page to the user, then allows redirection to the home page.	Works correctly	Could be better visually appealing
Book Page	Functions and directs user to pay	Two of the options do not work, putting the user to an error page. The remaining options work, getting users to an external payment window where they can pay	Instead of an external window, the booking system could be done inside the website.

Overall, the website successfully passed most of the requirements set. All elements worked as expected including the navigation bar, footer, booking system, videos and map. The website performed well, with no delays. The error page worked, serving its purpose. The user experience as a whole was smooth, with its features implemented in a way that improved the experience.

However, there were some areas for improvement. A few of the images, and the video were not of the best quality, resulting in pixelated images. This detracts from the user experience, coming off as unprofessional. Due to Adobe XD, users cannot type into the website, meaning its true interactivity was limited, as forms cannot be properly displayed and used.

In a second run of this project, I would choose to actually code the website, using HTML and CSS instead of Adobe XD, so the website could actually function, meaning working prototypes could finally be created. This means that my inquiry form would actually function, and user data would now have a way to be properly stored. Small animations would also help immensely, such as hover states changing elements, making the website feel more interactive and 'alive'. This would improve the user experience, and their engagement with the website. I would also prefer to get more present images for the website, so it can stay modern and relevant.

In conclusion, this website achieves the original goals set out, meaning Guru Driving School would have a competitive advantage over its

competitors. The website correctly simulates features that build up the user experience, despite the limitations of Adobe XD. If it were to be properly coded and implemented, the website would serve as a perfect opportunity for the business to grow and attract more customers.
